Figure 1.1. Integrated Concept Map: Foundations and Historical Development of Trauma Neurobiology

Chapter topics and a reading framework

- 1.1 Scope of neuroscience
- 1.2 Meaning of trauma in biological research
- 1.3 History of stress science
- 1.4 Early lesion and behavioural studies
- 1.5 Rise of psychophysiology
- 1.6 Development of neuroendocrinology
- 1.7 Growth of brain imaging
- 1.8 Translation from laboratory to clinic
- 1.9 Limits of biological reductionism
- 1.10 Integrative contemporary models

Read across levels

Neural • endocrine • immune • cognitive • developmental • social

For each topic: define the construct, examine the method, interpret uncertainty, and consider the decision or application.

Boxes index the chapter's existing section headings. Position is for navigation, not anatomical location or causal order. No connecting arrows are used because the outline alone cannot establish biological pathways.

Source: Chapter 1, section outline and existing discussion of evidence, interpretation, application, and review. Original editorial schematic; no empirical data are plotted. Subject-author review remains required.
